## OBJECTIVE

Aspiring AI Engineer focused on designing and deploying production-grade machine learning and LLM-powered systems end to end — from RAG pipelines and intelligent agents to full MLOps deployments with CI/CD, monitoring, and model tracking. My long-term goal is to grow into a Lead AI Engineer role at a large-scale organization, setting technical direction and mentoring engineering teams. I bring a hands-on track record spanning AI-powered applications, financial analytics, full-stack systems, and a live credit-risk model shipped through a complete MLOps pipeline, reinforced by professional certifications from IBM, Microsoft, AWS, and Duke University.

## EDUCATION

**Hamptons High School, Durban** *Jan 2023 - Dec 2023*
*Matric*

## SKILLS

**AI / Machine Learning:** scikit-learn, Pandas, NumPy, LangChain/LangGraph, RAG, Embeddings, MCP/FastMCP, Model Evaluation
**Deep Learning:** PyTorch, Transformers, Attention Models
**Backend & APIs:** FastAPI, Node.js, Express, REST APIs, Microservices
**Cloud & DevOps:** AWS (Lambda, EC2, S3), Docker, Kubernetes, GitHub Actions, CI/CD
**Databases:** PostgreSQL, Redis, SQL, Vector Databases
**Tools:** Python, React.js, Next.js, TypeScript, JavaScript

## PROJECTS

**Signalist — Stock Research & AI Analysis Platform** *Sep 2026 - Nov 2026*
*React, TypeScript, FastAPI, Python, CrewAI, CopilotKit, FastMCP*

- Built and deployed a full-stack stock research platform enabling users to search tickers, manage personalized watchlists, and view live market dashboards, company charts, and financial news.
- Engineered automated price and volume alerts with minute-level checks, alongside daily personalized news emails and investment-profile-based welcome emails.
- Developed a one-year market risk analytics pipeline calculating volatility, beta, maximum drawdown, Sharpe ratio, and Sortino ratio from daily price data, and added a Monte Carlo simulation of forward price bands (p5 / p50 / p95 and probability of loss).
- Built an AI-powered watchlist analyst using React, CopilotKit, and a FastAPI CrewAI service to simulate historical allocations on tracked stocks, with guardrails against prompt injection, secret leakage, and requests for guaranteed trade outcomes.
- Added FastMCP tools to that analyst so the same chat can pull Finnhub headlines, live quotes, 1-year risk metrics, and the user's price alerts without replacing the simulation path.

**Credit Risk Prediction Model** | Python, scikit-learn, MLflow, Docker *May 2026 - Jun 2026*

- **Designed, built, and deployed a production-style MLOps pipeline** (FastAPI + Streamlit on Docker/Render, MLflow, Prometheus, DVC, GitHub Actions) for a live credit-risk model, raising hold-out accuracy **64.8% → 69.5%** by fixing training/serving skew with a unified ColumnTransformer artifact.
- **Engineered CI/CD with automated quality gates** (F1/ROC-AUC thresholds) that retrain, validate, and test on every push; debugged a NumPy version mismatch causing container failures and pinned dependencies for reproducible builds.

## CERTIFICATIONS

**IBM AI Engineering Professional Certificate** *2025-08*
*IBM*

**Microsoft Azure AI Fundamentals** *2024-12*
*Microsoft*

**AWS Certified Cloud Practitioner** *2024-08*
*AWS*

**MLOPS Specialization** *April 23 2025*
*Duke University*

**Generative AI Engineering with LLMs Specialization** *2025-08*
*IBM*
